

Reality TV That's Worth Watching.

iNet powered by Security Networks, is the best in class interactive security system with monitoring and remote control services. You get instant video access to what's happening in your home or business anytime, anywhere.

iNet Video allows you to actually see what's happening at your property while you're away. It even offers options for outdoor and night-vision cameras to monitor what goes on in your yard, driveway or outside of your store.

Live Video

View real-time video of your home or business. Watch each angle one at a time, or take advantage of the Multi Camera View to see all camera views on a single screen.

Saved Video Clips

Easily set up your cameras to record video clips whenever motion is detected or during scheduled times. Then view, tag and search your clips to retrieve them later.

Video Alerts to Your Phone

Using any compatible cell phone or web-connected mobile device, you can access saved video clips and view live feeds. Video clips, system alerts and notifications can also be sent to your mobile device.

How it Works

iNet Video offers you a variety of security-grade IP video cameras and can even retrofit most traditional analog (CCTV) security cameras. Each camera includes built-in Wi-Fi or Ethernet connectivity and requires only a high-speed Internet connection and a power outlet with no further installation. The videos are stored remotely on our servers, so you'll be able to view both live and recorded clips anytime on the web, smart phone or PDA.

Unlike most security systems, **iNet** is 100% wireless. If the line is cut or there is a power outage, **iNet** is always connected.

Setup in Under 3 minutes

Live Video & Saved Clips via Web and Mobile Devices

Secure Off site Video Storage

Alarm and Motion-Triggered Video Recording

Indoor & Outdoor IP Camera Options

IP Video Server Retrofits Any Analog Camera

No Special Gateway Required

Anytime. Anywhere. Always Connected.
